

Adobe PageMaker Postscript Instructions

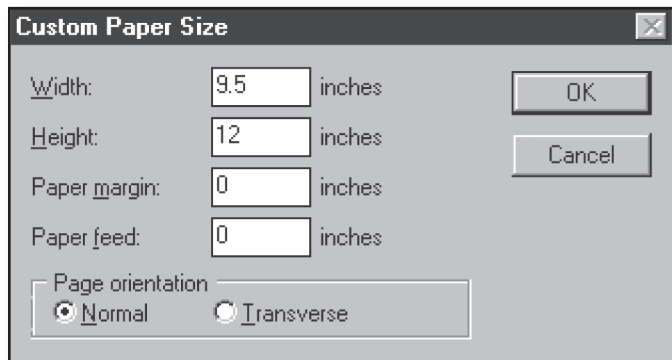

Use these step by step instructions to create "print quality" Postscript files.

Step 1: Select Print under the File menu. Under the Document tab, choose a postscript printer, we have chosen the Apogee. Walsworth can provide you with the printer description if you do not have one available. Select the page range that you wish to postscript, dividing them into 16 page signatures work well.

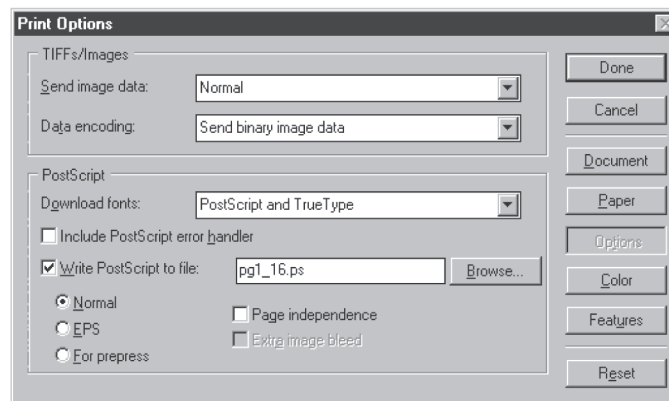

Step 2: Now select the Paper tab. Select the Printer's mark box. Make sure the Scale is on 100%.

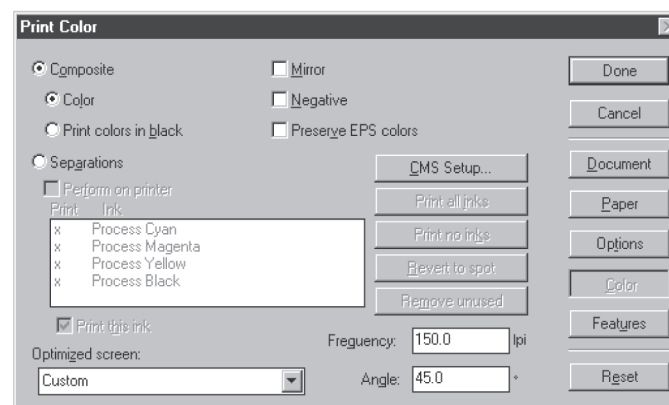

Step 3: Choose the Custom Paper Size. The paper size should be 1 inch larger than the trim size of the book.

Adobe PageMaker Postscript Instructions

Step 4: In the Options dialog box, setup the dialog box like the above figure. Click on the Write Postscript to file: button and type in the file name. Include the page range in the file name.

Step 5: Under the Color tab, select Composite Color. Set the Frequency on 150.0 lpi. Click on the Done button and the postscript file will be saved.

Step 6 Take this Postscript file and drag and drop it in your Distiller window to create your PDF file. Please contact Walsworth Technical Support to retrieve the proper Distiller settings.
